A Marine's Dream

A Marine dreams of his home
In the outdoors where he was born
Of wooded hill and dale
Of fields of standing corn

A glimpse of a fleeing rabbit
A little beagle ringing song
These are his fondest dreams
When the nights are long

When the war is over
And the boys come marching home
This Marine and his dog
Once again, the fields will roam

For hunting is his pleasure
That he always will enjoy
To some he's a big Marine
At heart, he's just a boy

PVT. HAROLD W. FISHER,
U. S. Marine Corps.

Do You Know That

By W. W. BRITTON

1. The pioneer fur traders in Alaska and Canada offered rewards to the Indian or Eskimo who saw the first goose of the spring, and all joined in jubilant welcome to the newcomer.

2. Two thousand years ago many learned persons advanced the idea that migratory birds flew to the moon and there spent the winter.

3. The mystery of migration had men like Aristotle so puzzled that many of them thought that the larger birds carried upon their backs as living freight the smaller birds which were known to be notoriously poor flyers.

4. The majority of small birds and many of the larger migrate at night, so that they may more readily elude their enemies under cover of the darkness.

5. Reverse Migration, called "Vagrant Migration" has been noted among the Heron Family. Many of these birds go North after nesting season for a short time previous to their southern flight.
